Storing Wire Ropes

Wherever possible, ropes should be stored on pallets in places that are clean, dry, and protected against strong solar radiation. If ropes are stored outdoors for a short term, the plastic foil covers should be checked for condensation and the ingress of air at regular intervals.

Recoiling and Spooling of Wire Ropes

Should be rolled as the figure below to prevent damages

Moving the ropes

Transport the rope preferably on a reel. Use suitable means for a safe transport of the reel. Coiled rope sections are best transported by means of a lifting belt. Avoid contact of the rope with hard surfaces. The ropes should not be loaded by their own weight.
